

SafeCircle

One community. One circle. Safer together.

The opportunity

Good day everyone.

Imagine walking home alone, a family member experiencing a medical emergency, an elderly person needing assistance, or someone encountering danger in their community. In these moments, every second matters. Yet getting help can involve searching for numbers, contacting several people, explaining a location, and relying on disconnected services.

SafeCircle is designed to solve that problem. It is a community safety platform that brings emergency assistance, trusted contacts, location sharing, safe journeys and community safety information into one simple experience.

Who we serve

SafeCircle is designed for people of all ages: children, students, working adults, families, elderly people, caregivers and people who may require additional assistance. The platform can also support community organisations and other safety-focused partners.

What makes SafeCircle valuable

Key capability	Investor value
☐ Emergency SOS	A prominent emergency action with a cancellation countdown and an emergency workflow.
☐ Trusted Circle	Users choose family, friends, neighbours, caregivers or other trusted contacts.
☐ Location Sharing	Users can share their location when they request assistance, subject to device permissions.
☐ Safe Journey	Set a destination and expected arrival time, then check in when safely arrived.
⚠ Community Alerts	Share and review community safety notices, with verification and moderation planned for production.
☎ Emergency Access	Quick access to configured emergency-service calling options.
☐ Privacy Controls	Clear controls over profile information, trusted contacts and location permissions.

Key capability	Investor value
& Accessible by design	Large controls, clear labels, high contrast and simple emergency flows support varied users.
□ Scalable platform	Future versions can add multilingual support, secure push/SMS escalation, organisation dashboards and verified community reporting.

Why it is different

Many safety tools focus on a single function. SafeCircle's proposition is to connect several safety actions in one user journey: get help, reach trusted people, communicate location, manage a journey and stay informed about community risks. This creates a single, recognisable safety layer rather than requiring users to move between multiple disconnected tools.

How SafeCircle creates value

For users, the value is speed, simplicity and connection during stressful situations. For communities, the platform can support coordinated safety communication. For organisations, future versions can provide subscription-based safety tools, administration dashboards, managed circles and partnership services. Potential revenue streams include organisation subscriptions, premium safety features and strategic partnerships, while keeping essential safety functionality accessible.

Vision

Our vision is bigger than an emergency button. We want SafeCircle to help create connected communities where people can look out for themselves and for one another.

SafeCircle — One community. One circle. Safer together.

Product note: the current project is a functional installable prototype. Secure backend notifications, production-grade community verification, encrypted account infrastructure and formal emergency-service integrations should be implemented and tested before real-world emergency deployment.
